

# ABSTRACT

A silicone rubber composition comprising (A) an  
5 organopolysiloxane having at least two aliphatic unsaturated  
groups, (B) finely divided silica, (C) a metal powder or an  
electrically conductive metal-plated powder, (D) an adhesive  
aid, and (E) a curing agent cures into silicone rubber  
having a low volumetric resistivity and a stable high  
10 conductivity, exhibiting improved adhesion to resin and  
metal substrates, and thus suitable as electrically  
conductive parts and electrical contacts in electrical  
equipment.
